

Exit & NOC Clearance — Complete Journey

From resignation to certificate · Voluntary & Involuntary · All gates · Every automation · Source-verified 2026-09-14

EXIT FSM: 11 STATES

9 CLEARANCE TASKS

8-SIGNATORY NOC CHAIN

LWD AUTO-TRIGGER 8 AM

3 EXIT GATES

OBJECTION ≠ REJECTION

Section 0 — Who Can Raise a Resignation & What Each Party Sees

Three initiators · Same FSM flow · Employee always sees it · Withdrawal rules enforced server-side

Employee — Self Service

HRMS PORTAL / MY RESIGNATION

Opens `/exit/resignation` in their portal. Fills reason, notice date, F&F preference. Server **forcibly overwrites** the `employeeId` body field with their own ID — they **cannot raise for anyone else** even by manipulating the request body. Completely safe.

`initiated_by = 'employee'`

Own record only

Manager — On Behalf

EXIT COMMAND CENTER

Manager with manager role can raise an exit for any team member by supplying their `employeeId`. Server sets `initiated_by = 'manager'` from the caller's role — body cannot override. Can cover absences, forced exits, or resignation capture during appraisals.

`initiated_by = 'manager'`

Any team member

HR / Admin — Involuntary

EXIT COMMAND CENTER

HR handles involuntary exits — absconding, abandonment, termination. Sets `exit_type = 'absconding'`, records `absconding_since` (the last day employee actually worked). Server sets `initiated_by = 'hr'` from role. LWD = `absconding_since` directly — no grace days.

initiated_by = 'hr'

Any employee

Employee Always Sees Their Resignation — Regardless of Who Raised It

GET `/api/exit/resignation/my` → WHERE `employee_id = logged-in user's employee id` — returns ALL records on their account

✓ WHAT EMPLOYEE SEES

Current status with full timeline (**submitted** → **manager_review** → **accepted...**)

Who raised it — `initiated_by` field shows **'employee'** / **'manager'** / **'hr'**

Confirmed last working day once set by HR

Retention offers from HR — can respond: accept / decline with remarks

Full audit trail — every status change with actor name and timestamp

⚡ WHAT EMPLOYEE CAN / CANNOT DO

✓ **Withdraw** their own resignation — ONLY while status = submitted. Backend checks `employee_id` + status gate.

✓ **Respond to retention offers** — accept or decline with remarks, visible to HR and manager.

✗ **Cannot withdraw** HR-raised absconding/involuntary exit — only HR/Admin can revoke it.

✗ **Cannot withdraw** after manager accepts — locked for employee once past submitted status.

✗ **Cannot bypass** clearance tasks, skip NOC chain, or approve their own F&F.

✓ Same FSM flow regardless of who raises the resignation

* `notice_serving` is skipped for absconding/involuntary exits — goes directly from `accepted` → `clearance_pending`

Section 1 — Exit Initiation (Paths Diverge)

Voluntary resignation vs Involuntary / Absconding — each track's unique steps

Voluntary Resignation

exit_type = voluntary

1

Employee Submits Resignation

Via HRMS portal. Fills reason, notice date, F&F preference. Status: **draft** → **submitted**.

Employee-initiated

2

Manager Reviews (Cannot Reject)

Status: **submitted** → **manager_review**. Manager **cannot reject** (ruling 2026-09-12 — only employee may withdraw). Manager may record an **Objection** with a mandatory reason — resignation stays active and notice period continues unchanged.

→ accepted

Objection (non-blocking)

Only employee → withdrawn

3

Notice Period

Status: **accepted** → **notice_serving**. Default 30 days (policy config), manager can override. HR confirms last_working_day_confirmed in system.

Default: 30 days

Manager override allowed

4

Clearance Phase Begins

Status: **notice_serving** → **clearance_pending**. 9 clearance tasks auto-created on acceptance. All must be cleared or waived before F&F.

9 tasks auto-created

5

F&F Calculated & Approved

Status: **clearance_pending** → **fnf_pending**. F&F calculation reviewed and approved. Must NOT be provisional (is_ff_provisional = 0).

→ fnf approved

Provisional = BLOCKED

6

LWD → NOC Auto-triggered

At 8 AM on LWD, system auto-creates NOC case and emails invite link. Employee fills self-declaration. NOC is a **hard gate on "exited"**.

Employee fills form via link

NOC gates exited status

Involuntary / Absconding

exit_type = absconding / abandonment

1

HR Creates Exit Record

HR raises exit with **exit_type = absconding / abandonment**. Records **absconding_since** — last date employee actually worked. No employee consent required.

HR-initiated

No employee consent

2

LWD = absconding_since (Direct)

Fixed 2026-09-12 — was LWD = absconding_since + 7 grace days (overpayment bug). Now LWD = exact last day worked. No notice period. Status: **accepted** → **clearance_pending** (notice_serving skipped).

No notice period

LWD = last seen date

3

Resignation Not Revoked

If employee returns with explanation, HR sets status = **revoked**. NOC trigger **permanently skips** this record. *rejected* is a legacy-only status (11 old rows, no new transitions).

Proceeding → clearance_pending

Revoked → NOC skipped

4

Clearance Phase (with Waivers)

Same 9 clearance tasks created. IT and Admin **waive** assets instead of marking returned. Waivers satisfy the Finance gate exactly like physical returns.

Assets waived, not returned

9 tasks created

5

F&F with Deductions

F&F calculation includes notice period recovery, asset deductions, outstanding loans/advances. Must be approved (not provisional) before proceeding.

Notice recovery deducted

Asset deductions possible

6

LWD → NOC Auto-triggered

Same 8 AM trigger. Since employee is absent, HR uses **"Record on behalf"** — fills mandatory resignation date, optional reason, F&F route. Chain unlocks immediately.

HR records on behalf

Resignation date mandatory

Both paths converge: NOC case auto-opens on LWD · NOC is a hard gate on reaching "exited"

revoked → skipped

withdrawn → skipped

exited → skipped

8 AM daily sweep · Scans exits where
LWD ≤ today · Status NOT IN terminal
list · No existing NOC case · 7-day
lookback for outages · openCase() is
idempotent

Section 2 — 9 Clearance Tasks (Auto-Created on Acceptance)

All must reach "cleared" or "waived" before employee moves to fnf_pending · Due date: 3 days from acceptance

Manager Handover

KT, pending work, client dependency, system access · Owner: manager

HR Exit Interview

Resignation acceptance, exit reason, interview completion · Owner: hr

Asset Recovery

Laptop, headset, ID card, access card, SIM, company property · Owner: admin

IT Access Closure

Email, VPN, client tools, internal apps deactivated post-LWD · Owner: admin

Roster Deactivation

Remove future roster assignments, stop WFM scheduling · Owner: wfm

Client ID Deactivation

Deactivate client system login, attach confirmation screenshot · Owner: wfm

Payroll Hold & F&F

Salary hold, advances, notice recovery, leave encashment · Owner: payroll

LMS & Cert Closure

Archive LMS status and training/certification records · Owner: trainer

Compliance & NDA

NDA/client confidentiality reminders, DPDP exit notice · Owner: hr

Clearance Gate

System checks `exit_clearance_task` — if ANY task is NOT 'cleared' or 'waived', the transition to `fnf_pending` is blocked. For absconding cases, all asset and IT tasks are typically waived with reason. Attachment upload supported on all tasks (e.g. Client ID deactivation screenshot).

Section 3 — NOC 8-Signatory Clearance Chain

Sequential Tiers 1–4 → Parallel Tier 5 (all 4 simultaneously) · Finance is asset-gated · 48h SLA per tier

8-Signatory Digital NOC Certificate

Precondition: `noc_case.status` must be `employee_submitted` (employee fills form, or HR uses "Record on behalf" for absconding)

Until the employee form is submitted, all 8 stages show "Waiting for employee form". The form can be filled by the employee via invite link, or by HR using "Record on behalf" for absconding employees.

1

Team Leader — Tier 1

SEQUENTIAL · 48H SLA

Confirms exit acknowledged · KT done · No pending critical tasks · First to act · Unlocks Tier 2

2

Process Manager — Tier 2

SEQUENTIAL · 48H SLA

Process handover complete · No open client escalations · KT sign-off confirmed · Unlocks Tier 3

3

Branch Manager — Tier 3

SEQUENTIAL · 48H SLA

Branch clearance · No NDA concerns · No disciplinary flags · Unlocks Tier 4

4

HR — Tier 4 (HR Gate)

HR GATE · 48H SLA

Documents confirmed · Leave balance settled · Experience letter ready · **Accepting**
HR unlocks all 4 Tier-5 departments simultaneously

⚡ **TIER 5 — ALL 4 UNLOCK SIMULTANEOUSLY WHEN HR (TIER 4) SIGNS**

5  **IT Department**
System access, email, VPN revoked

6  **Admin / MIS**
ID card, biometric, locker cleared

7  **Accounts**
Advances, loans, petty cash settled

8  **Finance**
⚠️ **Asset-gated** — all REQUIRED assets must be returned or waived first

 **Finance Asset Gate**
Every item with `is_mandatory_for_finance = 1` must have `status = 'returned'` OR `waived_at` IS NOT NULL. Finance Accept button is disabled in UI while gate is open. SLA reminder worker also excludes Finance from overdue alerts while structurally blocked.

Decline Path — Any Tier

Any signatory can Decline with a mandatory remark. Status → *declined*. Chain halts. HR gets high-priority inbox alert. HR resolves the issue and reopens the case — declined stage resets to pending and chain continues from that point.

SLA Reminder Engine (Hourly Worker)

Stage pending beyond **48 hours** → Reminder #1 to role holder (email + Work Inbox) · +24h → Reminder #2 · **Branch Head added to CC** · +24h → Reminder #3 (final) · Finance excluded from overdue while asset gate is structurally blocked · Max 40 reminders per hourly sweep

Section 4 — 3 Gates Before "Exited" & Final Outcomes

ALL three must pass (checked in `finalExitBlockers()`) · Any one open gate blocks the exited transition

Gate 1 — Clearance Tasks

0 open tasks in `exit_clearance_task`. Every task must be `status = cleared` or `waived` before transition to `exited` is allowed.

Gate 2 — F&F Approved

full_final_calculation must exist, status = "approved" or "paid", and is_ff_provisional must be 0 (not provisional).

Gate 3 — NOC Completed

If NOC is required (inactive employee + open salary), noc_case.status must be "completed" before exited transition is allowed.

NOC Certificate Generated

Digital 8-signature certificate auto-generated. All signatories listed with name, role, timestamp, remarks. Printable from clearance workspace.

Salary & F&F Released

Payroll salary gate lifts. F&F settled per chosen route: current payroll / 45 days / both. Payroll Head and HR notified via Work Inbox.

Employee Fully Exited

Status → exited / closed. Experience letter, relieving letter generated. Employee account deactivated. All inbox tasks auto-resolved.

Section 5 — System Automations

Zero manual triggers required — everything fires on schedule or on event

Daily 8 AM — NOC Case Auto-Creation

Scans `exit_requests` where `LWD ≤ today`, status not terminal, no existing NOC case. Auto-opens case, mints invite link, emails employee, creates HR Work Inbox item (high priority). 7-day lookback for missed LWDs. `openCase()` is idempotent — safe to re-run daily.

Event-Driven — Stage Unlock Notifications

Every accepted stage immediately notifies the next stage holder (email + Work Inbox). HR accepting Tier 4 notifies all 4 Tier-5 holders simultaneously. Notifications are deduplicated — no double-firing even on retry.

Hourly — SLA Breach Reminders

`noc-sla-reminder` worker sweeps every hour. Stages past 48h SLA get up to 3 reminders (24h apart). Reminders #2 and #3 copy Branch Head. Finance excluded while asset gate is structurally blocked. Max 40 reminders per sweep.

On Completion — Inbox Cleanup + Gate Lift

When last required stage is signed: all NOC inbox items auto-resolved, salary release gate lifts, HR and Payroll Head receive completion notification with F&F route. Case permanently marked completed.

Section 6 — Status Reference

`exit_request.status` FSM (11 states) + `noc_case.status` (5 states)

EXIT_REQUEST.STATUS

DRAFT → SUBMITTED

Created, then submitted by employee or HR

MANAGER REVIEW

With manager.
Accepts or records objection (cannot reject)

ACCEPTED

9 clearance tasks created. Notice period begins.

NOTICE SERVING

Voluntary only.
Notice period running. LWD confirmed.

CLEARANCE PENDING

9 tasks must be cleared/waived.
Assets being recovered.

FNF PENDING

F&F under calculation. NOC chain also runs here.

CLOSED → EXITED

All 3 gates passed. Employee fully exited.

REVOKED / WITHDRAWN

Terminal. NOC skipped permanently.
rejected = 11 legacy rows only.

NOC_CASE.STATUS

INVITED

Case open. Form not yet submitted. All stages locked.

EMPLOYEE SUBMITTED

Form filled (employee or HR on behalf). Tier 1 actionable.

IN PROGRESS

Chain moving. One or more tiers signed.

DECLINED

A tier declined.
Chain halted. HR resolves and reopens.

COMPLETED

All 8 signed.
Certificate ready.
F&F gate lifted.

Section 7 — Complete Process Flowchart

Full FSM from initiation to exited · Both paths · All decisions · 3-gate check

MAS Callnet PeopleOS — Exit & NOC Clearance System · Source-verified 2026-09-14 · All 11 FSM states · All 9 clearance tasks · 3 exit gates
